

international journal of electrical engineering education

Volume 8

Issues 1 - 6

1970

Consultant Editors

Professor L. M. Wedepohl

Professor Colin Adamson

Editor

Michael G. Hartley

Department of Electrical Engineering and Electronics

*The University of Manchester Institute of
Science and Technology, Manchester, M60 1QD England*

Book Review Editor

Guy de Visme

Assistant Editor

R. M. Kay

The *International Journal of Electrical Engineering Education* is published for the Electrical Engineering Department of the University of Manchester Institute of Science and Technology by Pergamon Press, Oxford. Publication is bimonthly. The *Journal* replaces the *Bulletin of Electrical Engineering Education* which was published twice a year by the College until December 1962.

CHICAGO CIRCLE

editorial advisory panel

Chairman

Professor C. Gregoire
Département d'Electricité, Faculté Polytechnique de Mons, Belgium

Australia

Dr. R. A. Coombes
W. Australia Institute of Technology, Perth, Western Australia

Canada

Professor J. Reeve
Electrical Engineering Department, University of Waterloo, Ontario, Canada

Egypt

Dr. S. I. Saleeb
Scientific Computation Centre, Cairo University, Giza, Egypt

France

Professor N. J. Felici,
University of Grenoble, Laboratoire d'Electrostatique et de Physique du Metal, Grenoble, France.

Iraq

Dr. N. K. Wafi
College of Engineering, Baghdad University, Iraq

Italy

Professor A. L. Frisiani,
Instituto di Elettrotecnica, Facolta di Ingegneria, University di Genova, Genoa 67, Italy.

Singapore

Professor J. W. Y. Chen
Electrical and Electronics Engn'g Dept., Faculty of Engineering, University of Singapore

South Africa

Professor N. C. de V. Enslin
University of Cape Town, Rondebosch, Cape Province, South Africa

Spain

Professor Carlos Jordana
Escuela Técnica Superior de Ingenieros Industriales, Universidad de Navarra, San Sebastian, Spain

Sweden

Professor Sune Rusck
Electric Power Systems Eng'g., Royal Inst. of Technology, Stockholm

Syria

Dr. S. M. El-Sobki
Unesco Advisor, Technological Institute of Damascus, Syria

Turkey

Dr. Ayhan Tureli
Electrical Eng'n. Dept., Technical University of Ankara, Turkey

United Kingdom

Professor P. Hammond,
Electrical Engineering Department, The University, Southampton, SO9 5NH

J. Heywood Esq.,
Department of Educational Research, University of Liverpool

A. C. Normington Esq.,
Head of Electrical Engineering Department, Bolton Institute of Technology, Bolton, Lancs.

United States of America

Professor T. J. Higgins,
Electrical Engineering Department, University of Wisconsin, Madison 6, Wisconsin, U.S.A.

Professor J. Willis,
Engineering Department, University of California at Los Angeles, California, U.S.A.

West Germany

Herr R. Uhrig,
6901 Altenbach, Kreis Heidelberg, Blumenstraße 20, Fed. Republic of Germany

Yugoslavia

Professor K. Prelec,
Faculty of Science, University of Zagreb, Marulicev trg 19, Zagreb, Yugoslavia

Notes to contributors

the benefit of readers and potential contributors, the main divisions of the *Journal's* contribution to electrical engineering education are summarized below. This list is not intended to be exhaustive.

Articles which describe methods for the presentation of new topics in electrical engineering or fresh aspects of teaching of traditional subject matter. The level of these articles will vary considerably. Some will cater for needs of the Technical Colleges, others for Universities, while some will be directed towards teaching at the -graduate level. While English is to be the preferred language, articles in other languages will be accepted. In event a brief abstract in English will be required. Abstracts of papers will also be given in French, German and Spanish. While authors will receive no payment for their contributions, they will be provided with a number of prints.

Accounts of laboratory experiments. These should describe new techniques for dealing with traditional subjects, or alternatively should illustrate new or expanding branches of electrical engineering. The accounts may be presented in one of two ways.

A complete, though concise, description, sufficient to enable the experiment to be set up in any teaching laboratory.

A brief 'Abstract' to be included in the *Journal*, accompanied by a complete Report not intended for publication.

Journal provides a service whereby those interested in particular reports which have appeared in the *Bulletin* or the *Journal* may borrow copies of the complete report. This is more appropriate, for example, when the number of diagrams makes it impossible to adopt procedure (a). This service is free to subscribers.

Articles which discuss the object, content and organization of part-time, sandwich, undergraduate, and postgraduate courses in technical colleges and universities in various parts of the world, also material relating to new ventures in industrial-university relationships, seminars, training schemes and graduate apprentice courses. Such articles should not be merely factual accounts, but should attempt to justify and assess such courses and events so that others are able to profit from the experience reported.

The pace of development in electrical engineering education, in common with other aspects of technical and scientific education, is now very rapid. Not all of the interesting experiments and advances arise directly as the result of university and college activities. Where there has been industrial or governmental initiative it is hoped to encourage publication of the details.

Articles which describe research, *provided that the topic has direct relevance to education at the undergraduate or postgraduate level*. There are many examples where successful research projects have led to new laboratory developments. This is particularly applicable where special apparatus and laboratories have been established in universities and other research institutes.

Short accounts of advanced and graduate lecture courses, particularly where these include sets of lecture notes that can be borrowed as in (2b).

Reports of educational conferences. The Editors propose to report on the proceedings of major educational conferences wherever they are taking place throughout the world through the International Advisory Panel. One or other of the Editors will probably be present at the more important European meetings.

Book Reviews. It is proposed to provide comprehensive and searching book reviews. The aim will be to assist materially those who are anxious to assess the desirability or otherwise of a particular volume to their facet of education. Bimonthly publication will ensure prompt review of books. Publishing houses are invited to submit books for review.

If members lecturing for the first time on a new topic often find a need for guidance as to the most appropriate literature in a particular field. To assist them it is hoped to encourage publishers to submit publications on various selected topics to the Editors so that survey reviews may be provided in these special fields.

Letters to the Editor. The Editors welcome correspondence connected with articles in the *Journal* and related subjects.

Subscription rates for Volume 8

(\$37.50) per volume for all institutional, industrial and government establishments. Other rates on application.

number 1

- 1 Editorial
3 Cooperative Engineering Education at the University of Waterloo by E. L. Holmes
11 Some Remarks on Load Flow and Optimal Load Flow Solution by Dr. T. Przybylski
21 Unbalanced Conditions in Synchronous Machines—Part 2 by V. Cook
33 Digital Computer Methods for Load Flow Calculations—Part 2 by W. D. Humpage
45 Potential Distribution over a String of Suspension Insulators by E. A-Z. H. Taha
53 Letter to the Editor
55 Abstracts of Articles English German
 French Spanish
63 Index to Book Reviews
65 Book Reviews

number 2

- 93 Editorial
95 A Note on Harmonics in a Synchronous Generator Supplying a Single-Phase Load by R. D. Slater and W. S. Wood
99 Laboratory Demonstration of the Autodyne Principle by R. W. Whitehead
105 Educational Technology at the Portsmouth Polytechnic, England by H. L. Bradley
109 MacBoolex: a Teaching Instrument for Switching Theory by I. Aleksander and R. W. Stanton
123 Teamwork with an Industrial Context in the Second-year Electronics Laboratory by J. A. Coekin
127 Measurement of the Leakage Reactance of Small Mains-frequency Synchronous Machines by O. E. Mainer
135 Project Work in Developing Countries: a British Experiment in Engineering Education by S. Goodlad
141 Optimum Supply Conditions for an Induction Motor by B. J. Chalmers and B. R. Sarkar
145 The Double-layer Resistance-network Analogue by M. Jevons
155 Abstracts of Articles—English German
 French Spanish
163 Index to Book Reviews
164 Book Reviews
183 Review of Reviews
